Kevin Hubert

Frontend Architect & Technical Lead | Senior Software Engineer | AI-Native Full-Stack

Georgetown, TX | 512.914.5156 | iamkevinhubert@gmail.com | kevinhubert.com | github.com/kevinhubert

SUMMARY

Frontend architect with 15+ years of experience, from early single-page banking apps to leading the Next.js migration of everlywell.com today. Most of my work now is building the context and guardrails that let AI agents write and review frontend code alongside a team. A philosophy degree turns out to be good training for it, since the job comes down to stating what you actually want and judging honestly whether you got it.

CORE COMPETENCIES

Agentic Engineering: Agent-first codebases, CI/CD agent automation, context and prompt engineering, reusable agent skills, Claude Code, Cursor, MCP, guardrails and trust boundaries, evaluation of agent output

Systems & Architecture: Platform migrations, design systems, design-to-code pipelines, design tokens, monorepos, async workflows, feature-flag and experimentation infrastructure, performance

Frontend Platform: React, TypeScript, Next.js, Node.js, accessibility

Full-Stack: Python (FastAPI), Ruby on Rails, REST APIs, SQL, GitLab CI, infrastructure as code

Leadership: Technical roadmaps, cross-team alignment, engineering guilds, mentorship, remote teams

EXPERIENCE

Everlywell, Senior Software Engineer — March 2026 – Present

Austin, TX

- Leading the migration of the everlywell.com e-commerce storefront off a legacy static-site stack to a new agent-first Next.js monorepo, designed so humans and agents work in the same codebase.
- Automated the delivery pipeline with GitLab CI and Cursor automations for merge requests and QA, and built ~10 Claude Code skills that make the dev loop repeatable, from ticket kickoff to staging deploys.
- Designed the context, prompts, and guardrails behind org-wide AI agents for frontend code review and accessibility autofix, integrated with Jira and GitLab.
- Built design-to-code agents that turn Figma designs into implemented UI, triggered by Jira workflow events, on top of unified design tokens and a shared component library.
- Kept frontend and backend teams moving in parallel by standing up skeleton API endpoints with mocked data, shipping an iOS app, a SPA results dashboard, and the web storefront, along with the consent and experimentation systems needed for compliance and growth.

Findhelp.org, Staff Software Engineer — April 2024 – March 2026

Austin, TX

- Architected the asynchronous workflows and custom feature-flag system behind program and referral management for social-services and government clients, reducing runtime errors in critical data-synchronization pipelines.
- Cut load times on program landing pages 20% by moving key endpoints to FastAPI.
- Built a design system and component library with metadata-driven fields, so new features are assembled from configuration instead of built from scratch, doubling frontend velocity.
- Led frontend architecture and set multi-month roadmaps for the Programs team, presenting cross-team plans at company-wide all-hands.

BuildASign, Senior Front End Developer — April 2015 – January 2024

Austin, TX

- Founded and led the Front End Guild, setting shared standards between frontend and backend teams.
- Led the migration of legacy systems to Next.js, cutting development cycles 30% while holding 99.9% uptime.
- Improved load times 25% by optimizing Core Web Vitals, lifting SEO and user retention.
- Guided the move to a fully remote team and raised sprint velocity 10% through process improvements.
- Built and led a UI pattern library for the company's largest division, standardizing design implementation across products.
- Mentored developers through monthly Developer Learning Hours.

Q2, Web Applications Developer — 2013 – 2015

Austin, TX

- Built the theming system behind Q2's white-label online banking platform, delivering a distinct, responsive brand for each financial institution from a single codebase.

EDUCATION

Texas A&M University, College Station: B.S., Philosophy
